Step 1

## Make the diagonal cut

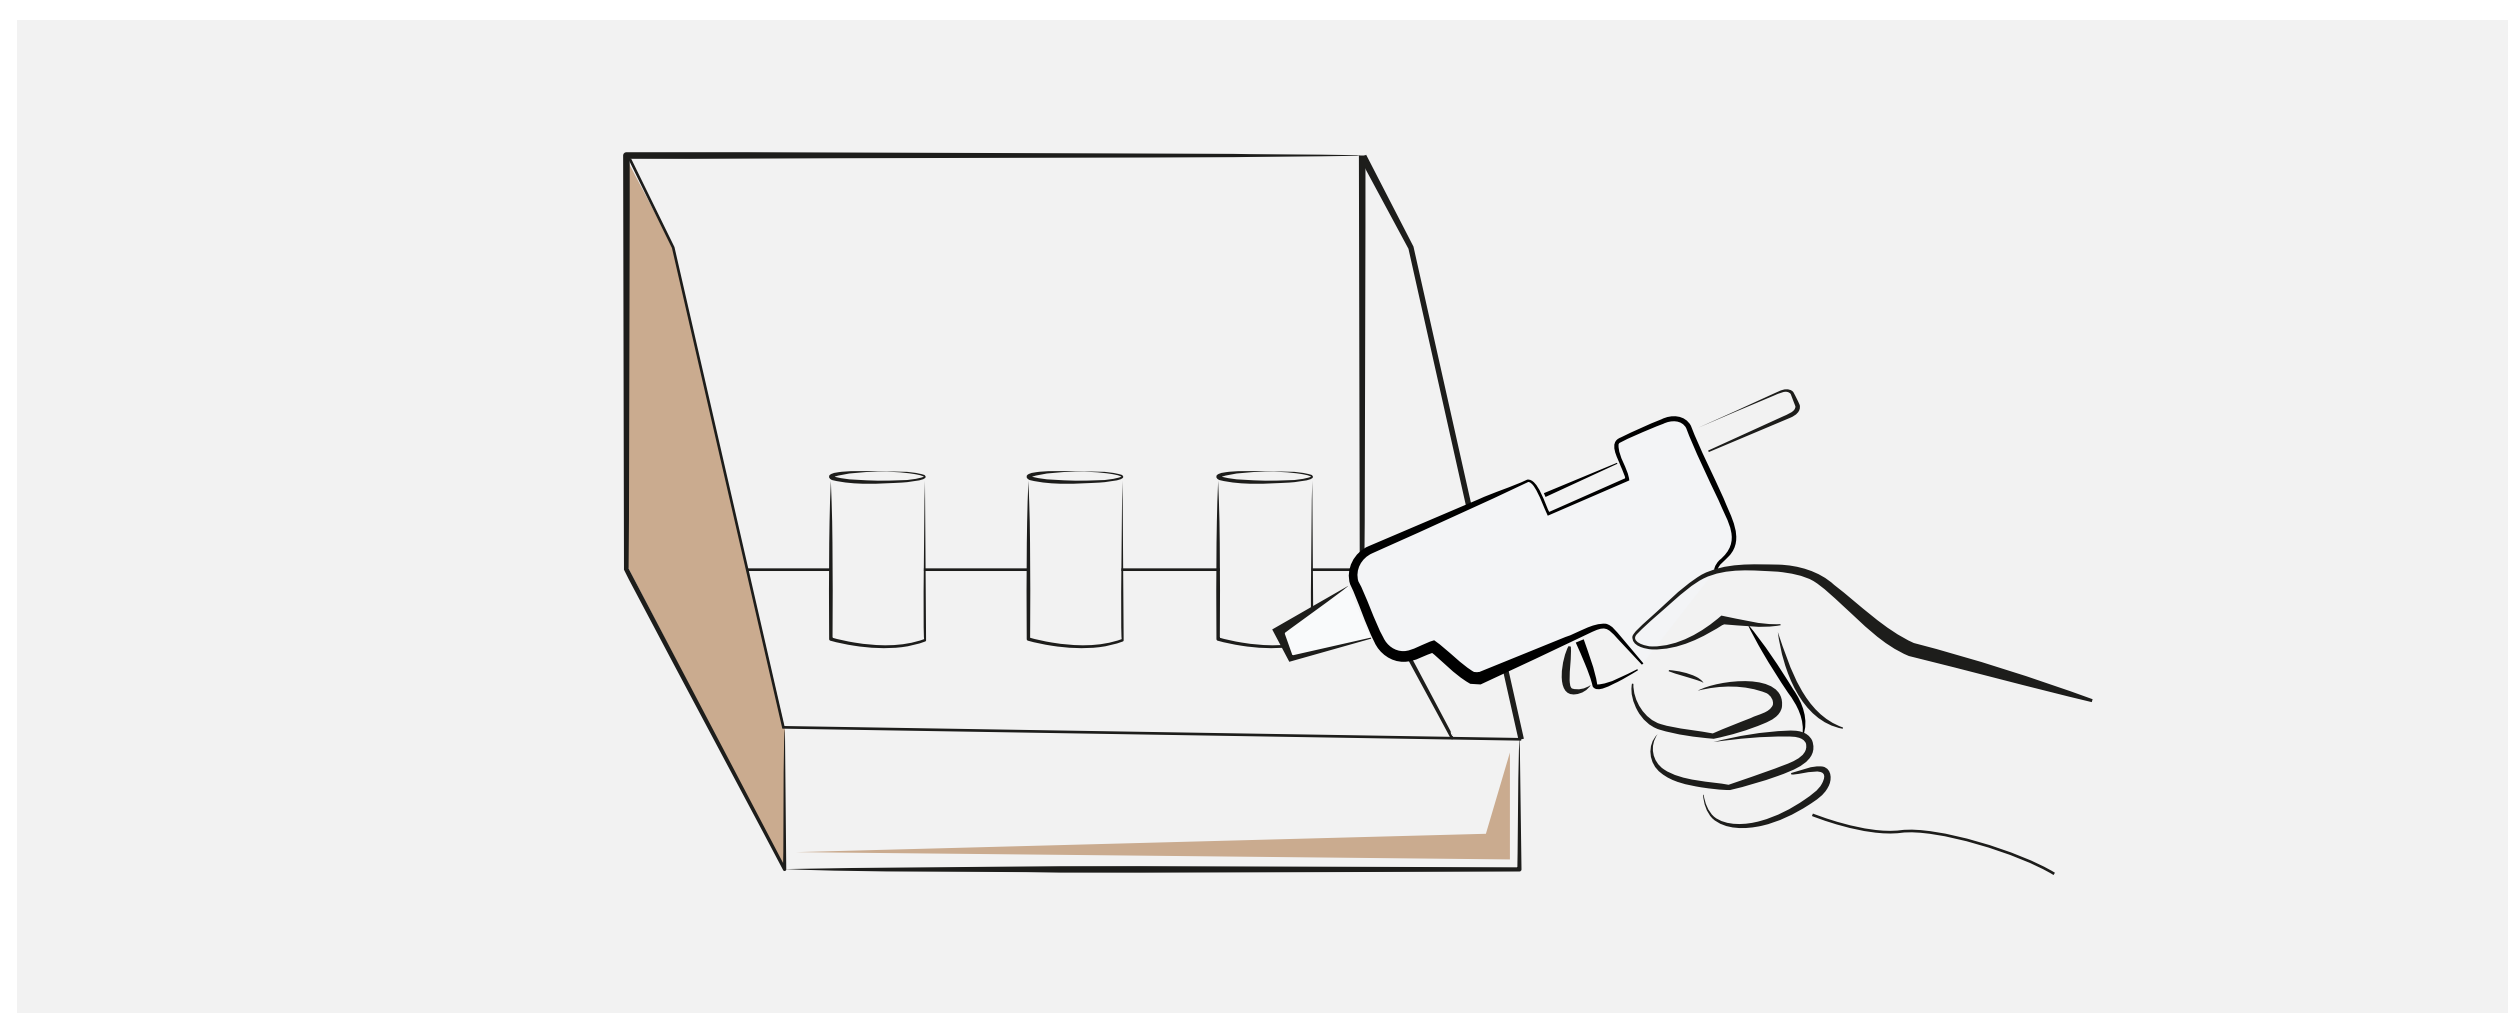

- Cut off the back flap.
- Decide how much of an edge you'd like your display to have at the front, measure and mark the spot at two front edges (lets say: 5cm).
- Measure the same distance from the back at the two top side edges. Connect all the marks and cut neatly along the lines.

Step 3

## Level the bottom

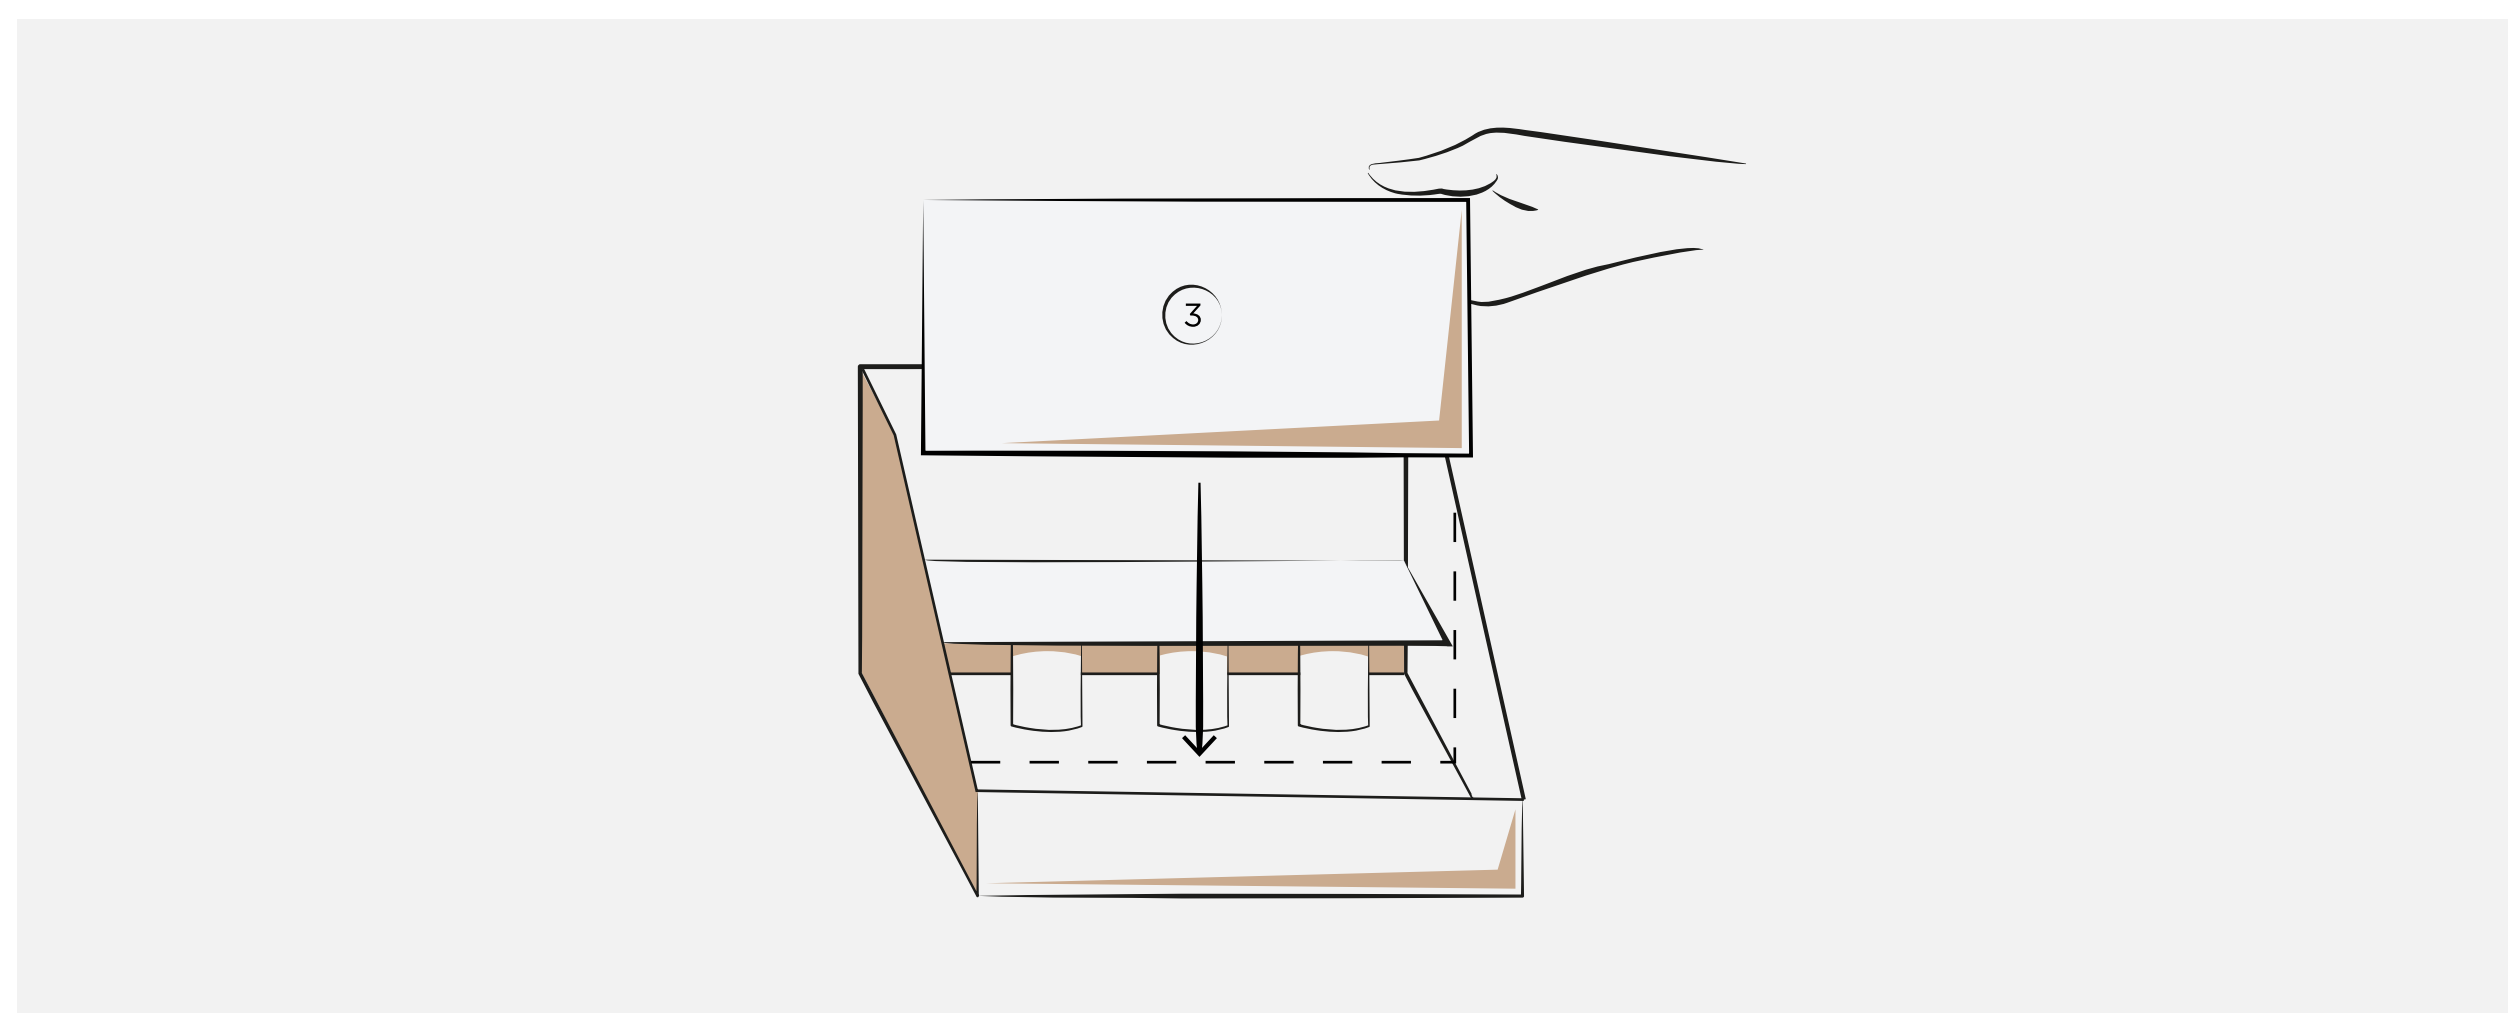

Use a side flap of the cut off part of the box to even out the bottom of the box if needed.

Step 5

## Fit the top shelf

The back flap of the cut off part of the box will be the exact width for a shelf. Place it on paper roll support and fasten it with glue.

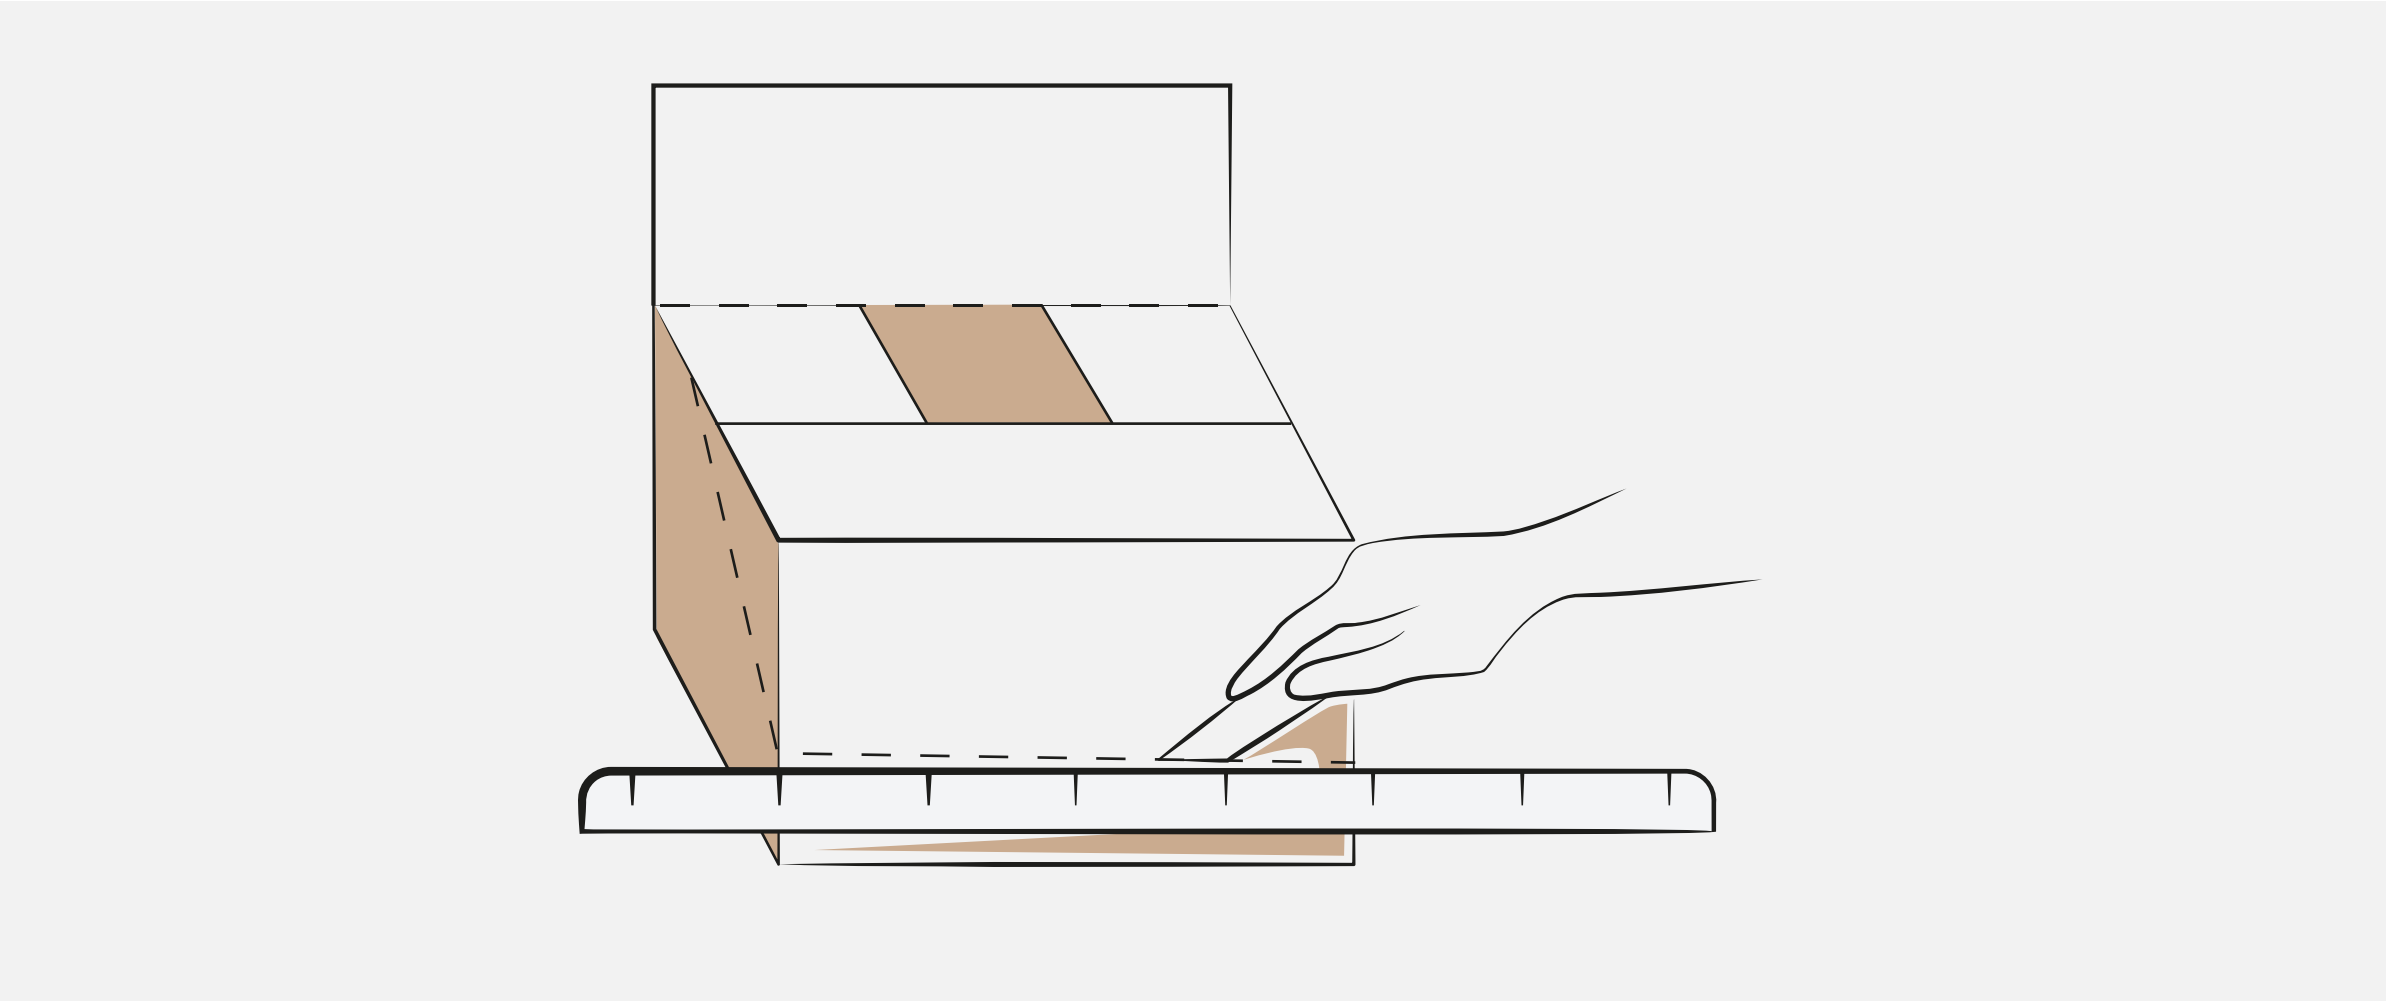

Step 7

## ... and glue it in place

You are done! You could at this point decorate your display. Or leave it as is — cardboard is quite stylish by itself, isn't it?

## Gather the necessary tools and material

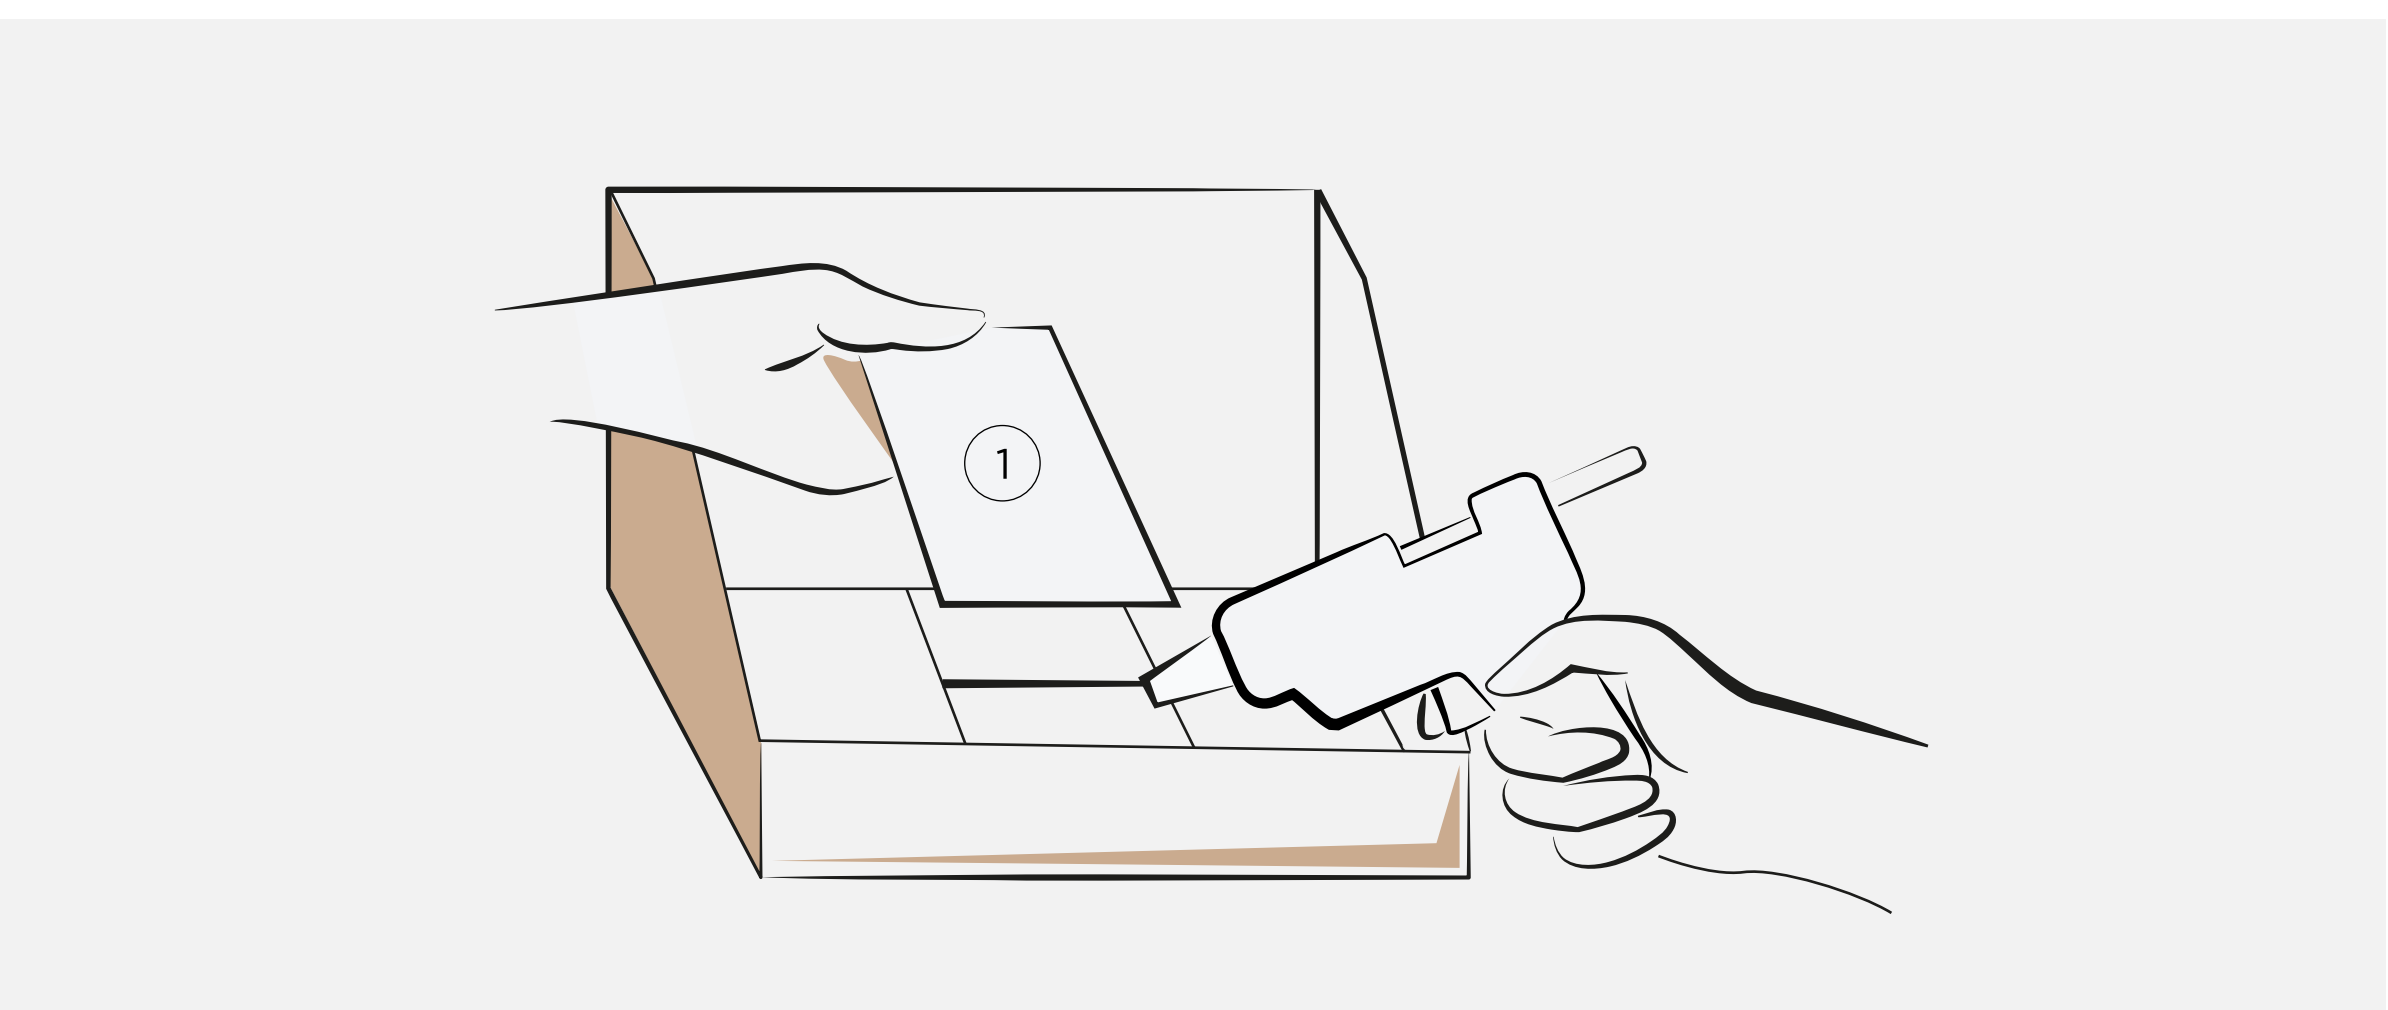

- A good box. Size depends on what you want to display.
  - Three cardboard tubes from toilet paper or kitchen rolls
- A glue gun or a suitable adhesive
- A box cutter for cutting
- An adult to actually do the cutting
- A ruler & pencil

Step 2

## This will come in handy!

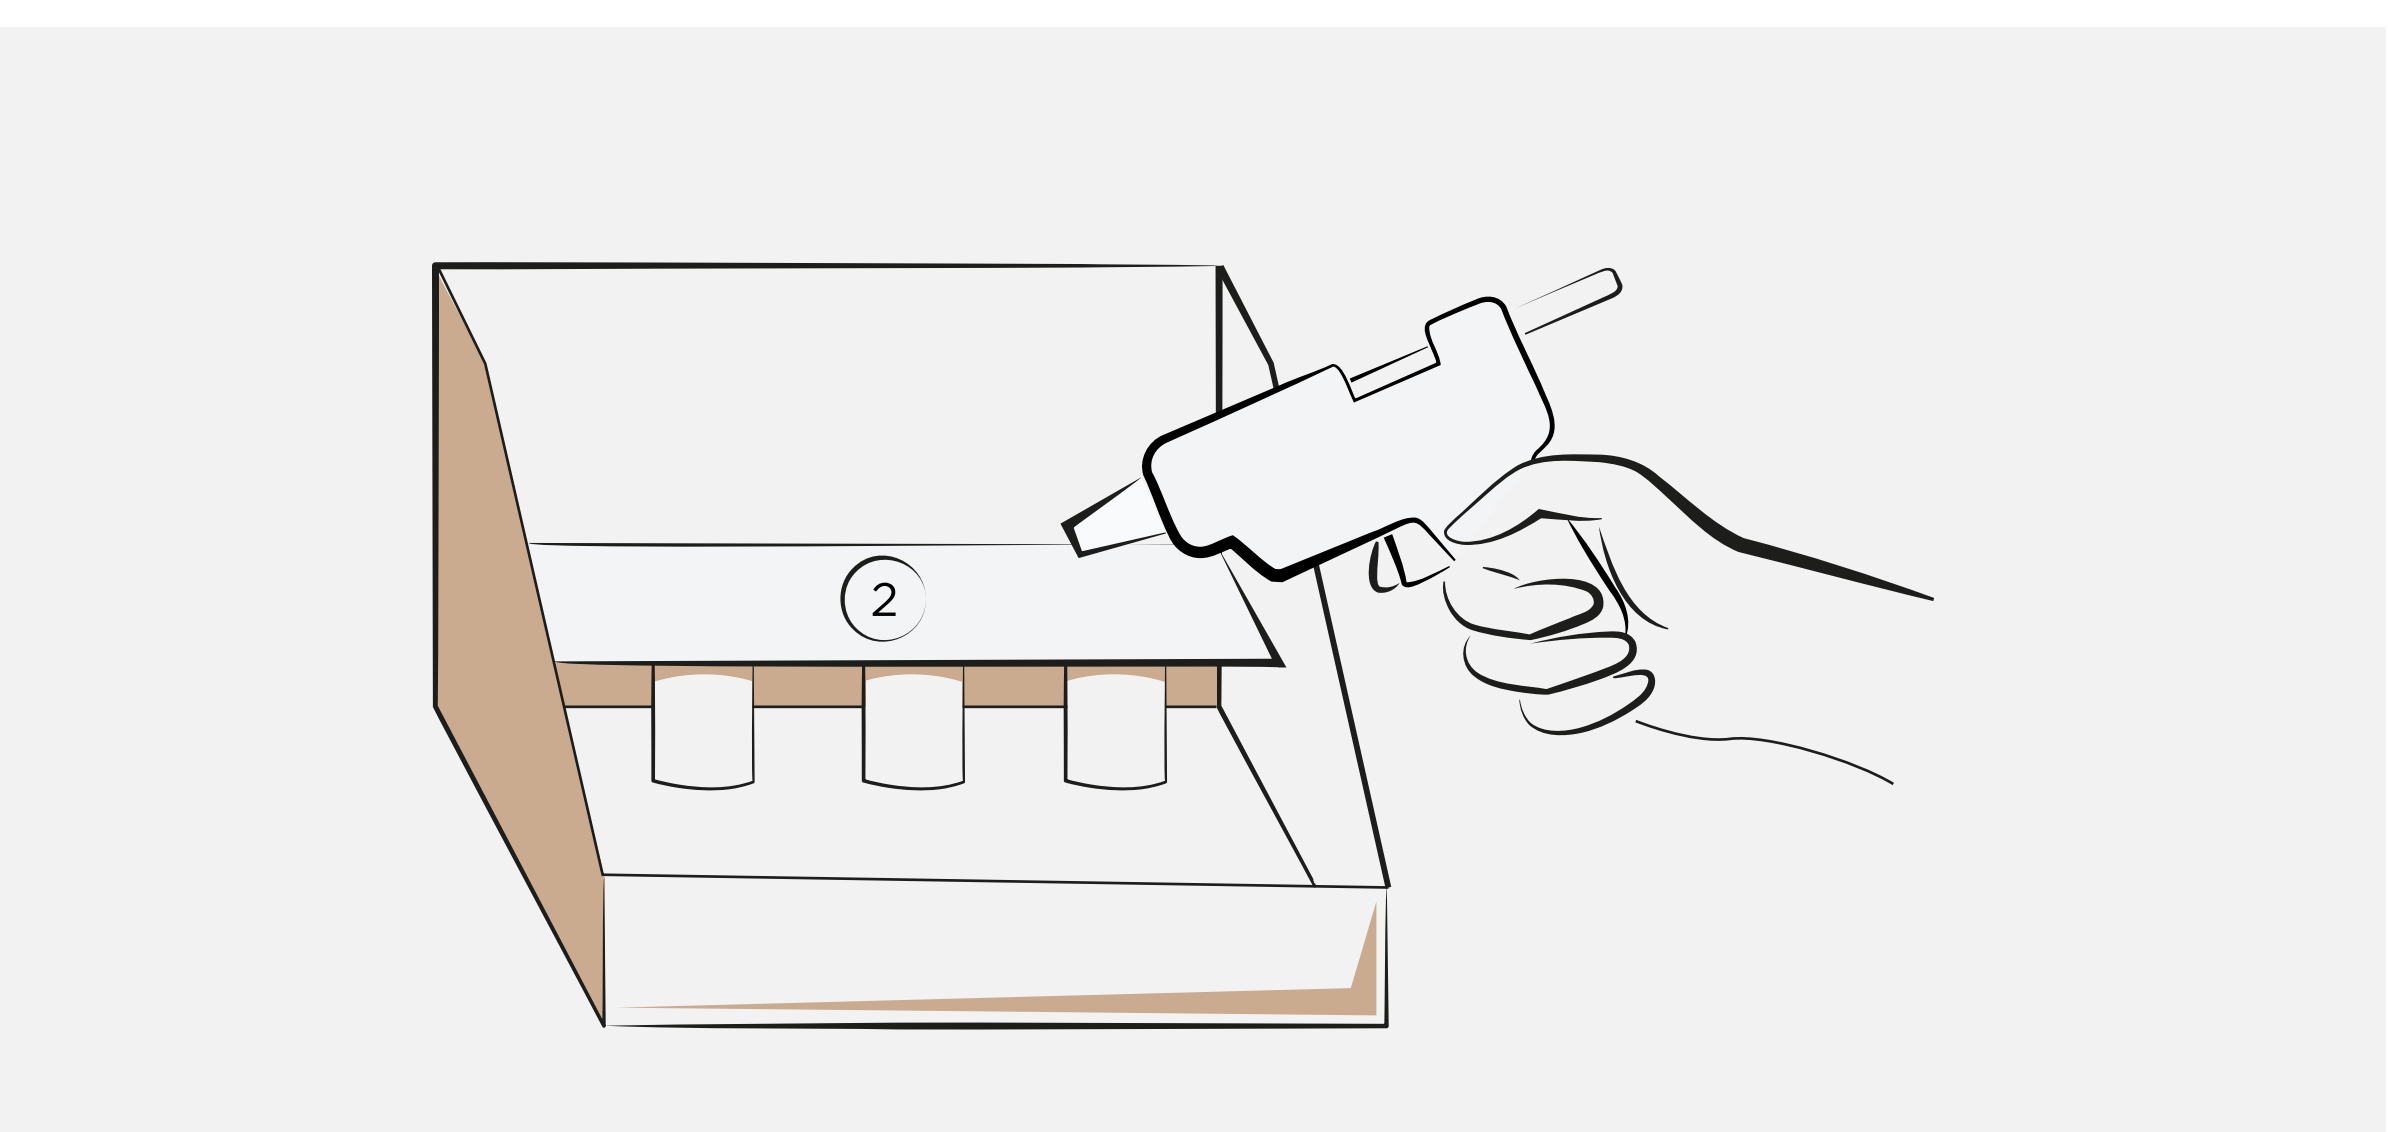

Keep the cut off part of the box intact for use in further steps.

Step 4

## Make supporting pillars

Adjust the height of your cardboard rolls to support the shelf and glue them evenly to the bottom of the box.

Step 6

## Prepare the top shelf...

Use the largest part of the cut off cardboard to create the back wall of the bottom shelf which will also serve as the front of the upper tier. Place it against the top shelf and mark where it meets the side of your box. Cut at this line.
